

ABGHI FAREIHAN DESAILIE

Mobile Developer (Flutter)

📍 South Jakarta, Indonesia ✉️ abghifareihand@gmail.com 🔗 linkedin.com/in/abghifareihand 🌟 github.com/abghifareihand
🌐 abghifareihan.com

Mobile Developer specializing in cross-platform mobile engineering (Android & iOS) using Flutter and Dart. Brings over 2 years of professional experience architecting scalable, maintainable mobile applications (MVVM & Clean Architecture), robust state management (BLoC & Provider), offline-first local persistence (SQLite & Hive), and hardware peripheral integrations (Bluetooth ESC/POS thermal printers & Android Presentation API). Experienced in seamless RESTful API integrations with a proven track record of shipping production-grade mobile applications.

WORK EXPERIENCE

Mobile Developer — Ignatia Sep 2024 - Present | Hybrid

- Contributed to mobile application feature development and hardware integrations for a flagship Point of Sale (POS) application.
- Built an integrated PPOB (Payment Point Online Bank) module within the main POS app for utility bill payments and digital top-ups via Nicepay gateway.
- Implemented Dual-Screen presentation support on Android POS terminals, enabling synchronized real-time customer-facing order and QRIS display.
- Stabilized and optimized the production mobile app through systematic memory profiling, bug fixing, and architectural refactoring.

Freelance Mobile / Fullstack Developer — Self-Employed Oct 2023 - Present | Remote

- Developed custom cross-platform mobile applications using Flutter (Android & iOS) with clean architecture and responsive UI.
- Built centralized web admin dashboards (Laravel) for data management, multi-role access control, and report visualization.
- Designed and engineered secure RESTful APIs (Laravel & Sanctum) powering seamless data integration with Flutter mobile clients.
- Managed end-to-end project lifecycles from MySQL database design and Figma UI slicing to system deployment.

Mobile Developer Intern — Perum Perhutani Nov 2023 - Feb 2024 | South Jakarta

- Developed 'Union Getah', an offline-first mobile application allowing forest rangers to record and calculate resin harvest yields in remote forests without network connectivity.
- Integrated portable Bluetooth thermal receipt printers (ESC/POS) for instant, on-site physical invoice printing for forest farmers.
- Architected isolated local caching with automated two-way batch cloud synchronization upon returning to cellular coverage.

EDUCATION

Bachelor of Computer Science (S.Kom) - Informatics — Universitas Nasional 2019 - 2023 | Jakarta, Indonesia

Focus areas: Software Engineering & Architecture, Object-Oriented Programming (OOP), Data Structures & Algorithms, and Relational Database Systems.

KEY PROJECTS

1. HRIS App & Web 2026

- Engineered an end-to-end HR management suite comprising an Employee Self-Service app (Flutter) and web dashboard (Laravel 13).
- Built real-time selfie clock-in/out with OpenStreetMap geofencing and mock location protection.
- Developed an automated payroll engine fully compliant with Indonesian PPh 21 (TER/PTKP) and BPJS regulations.
- Implemented automated workflows for leave, overtime, expense reimbursements, and salary loans.
- Designed flexible shift scheduling and peer-to-peer shift-swapping approval workflows.

2. Fondaco App 2026

- Engineered a B2B dental supplies e-commerce and medical seminar registration app using Flutter.
- Implemented Clean Architecture and BLoC pattern for robust state management and code maintainability.
- Built interactive product catalogs with instant search, multi-faceted filtering, and cart management.
- Developed dental workshop and seminar booking workflows with digital event ticketing.
- Created customer loyalty rewards (points accrual/redemption) and in-app WebView checkout integration.

3. QuickMark App 2026

- Developed a timber legality verification mobile application integrating with Indonesian Forestry Ministry (KLHK SIPUHH) APIs.
- Integrated camera-based barcode and QR scanning for rapid verification of registered timber log identifiers.
- Implemented an offline-first architecture utilizing NoSQL Hive storage for remote forest areas with limited connectivity.
- Built automated on-device data export capabilities generating formatted Excel (.xlsx) audit sheets.
- Added data integrity validations to prevent unauthorized logging record manipulation in the field.

4. PION App & Web ↗

2026

- Delivered a union digitalization platform featuring an intuitive mobile client (Flutter) and web portal (Laravel 12).
- Built interactive digital membership cards (e-KTA) with unique QR codes for instant member verification.
- Developed a secure, tamper-resistant digital voting system (e-Voting) for union leadership elections.
- Implemented a structured legal aid/grievance ticketing workflow with real-time progress tracking.
- Created transparent union financial reporting dashboards and real-time push broadcasts via Firebase Cloud Messaging (FCM).

5. Sales Inventory App & Web ↗

2025

- Developed a multi-tier inventory and field POS ecosystem utilizing Flutter (mobile) and Laravel 12 (web).
- Architected a traceable multi-tier stock transfer workflow from Central Warehouse to Branches and Field Sales agents.
- Built a mobile POS ordering cart with real-time tax calculation and profit margin estimation.
- Integrated on-the-spot thermal receipt printing via Bluetooth ESC/POS (58mm) hardware protocol.
- Implemented field stock return workflows and a multi-level transaction adjustment approval system.

6. Rekalaba PPOB App ↗

2025

- Developed an integrated bill payment (PPOB) module embedded within the Rekalaba POS Flutter application.
- Integrated multi-biller digital payments (utilities, telecoms, BPJS, e-wallets) via Nicepay API gateway.
- Enforced transaction security protocols using 6-digit cashier PIN authorization and SMS OTP.
- Implemented automated customer receipt printing via Bluetooth ESC/POS thermal printers.
- Designed an adaptive, responsive UI optimized for both smartphone and tablet POS form factors (Portrait & Landscape).

7. Absensi App & Web ↗

2025

- Developed a cross-platform mobile attendance app (Flutter) and centralized admin dashboard (Laravel 12).
- Integrated real-time location radius validation using OpenStreetMap geofencing.
- Implemented anti-fraud security featuring Fake GPS/Mock Location detection and Device Binding (UDID).
- Built granular multi-role access control tailored for Staff, Lecturers, and Students.
- Created digital leave/sick permission workflows with file attachments and automated PDF/Excel reporting.

8. Nuset App ↗

2025

- Developed an offline-first asset and heavy-duty operational tools tracking mobile application with Flutter.
- Implemented persistent on-device data storage utilizing a hybrid of Hive NoSQL and SQLite (Sqflite).
- Designed inventory movement logs (in/out) and end-to-end asset lending lifecycle tracking.
- Integrated camera capture for physical asset photo documentation with local image optimization.
- Created on-device report generation exporting comprehensive asset audits into Excel (.xlsx) format.

9. Overtime Connect App ↗

2025

- Built an overtime tracking and wage calculation mobile app using Flutter with clean MVVM architecture and Provider.
- Developed an automated calculation engine for tiered overtime rates aligned with Indonesian labor laws.
- Integrated interactive overtime analytics and weekly work-hour trend graphs powered by Syncfusion Charts.
- Implemented a monthly interactive calendar interface for attendance tracking and earnings forecasting.
- Secured user authentication via automated Gmail OTP verification.

TECHNICAL SKILLS

Flutter, Dart, BLoC, Provider, MVVM, Clean Architecture, REST API, SQLite, Hive, Git, Postman, Figma.
